

Case #3

As BodyTalk works to improve communication throughout the whole body-mind complex often more than the main concern will be addressed or in some cases there is a priority to address other issues first before the main concern can be dealt with. We sought to see the big picture by taking a baseline of numerous physical, mental, emotional, spiritual and social health concerns. The Children were assessed with 57 questions on a scale of 0 to 5. 0 being not an issue and 5 being severe.

Here are the individual case results:

Change by 1-2 points= Slight Increase in incidents or Slight decrease

Change of 3 points= Moderate Increase or Moderate decrease

Change of 4-5 points Major increase or Major decrease

	Initial	Final	Result
FOOD allergies or intolerances?	0	0	Not applicable
